

Motion activated projections for the Care Sector

OM INTERACTIVE

We are a pioneering interactive technology company who were the first in the world to introduce motion-activated projections to Day Centres and Special Needs settings in 2005.

We have led the way in developing sensory environments that encourage participation at all levels and truly engage the individual regardless of age or ability.

INTERACTIVE PROJECTIONS IN CARE SETTINGS

At OMI we recognize and understand the value that powerful visual/aural sensory stimuli can have in maintaining and improving;

- Neurological pathways
- Language and communication skills
- Coordination and physical ability.

Those with learning disabilities, age-related diseases, mental health issues or other physical health concerns need opportunities to actively;

- Take part rather than passively watch
- Socialize and enjoy activities working together
- Stretch, compete, think and be challenged

'Our residents are really enjoying all the different activities offered by the Mobii system. It's a powerful social tool, engaging them in quizzes, coordination games and reminiscence therapy as well as encouraging them to move and stretch'

*Annette Sudbury-Smith,
Manager, Tara's Retreat Care Home, St Albans*

Neurological findings in recent years continue to support the claims that regularly involving people in activities which stimulate movement, communication and mental engagement will always be beneficial and ultimately enhance their quality of life.

In those who have used our systems, professionals have witnessed positive changes in;

- Emotional stability
- Mood/outlook
- Sense of self-worth/belonging
- Physical effort/energy
- Social involvement
- Ability to share and enjoy

'We've had the omiVista floor for 3 years now and find it an excellent tool to enable us to communicate with older people who have various degrees of cognitive impairment'

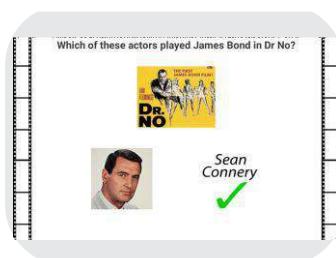

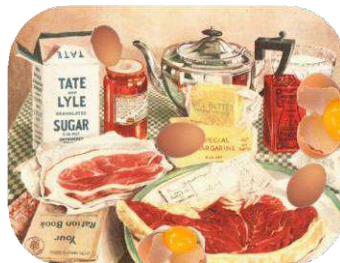

Emma Wootten, Age Connects Development Coordinator, Widdershins Centre, Torfaen, Wales

CARE SUITE

This Suite has been specifically designed to be age appropriate whilst including all of the important elements necessary for Apps to stimulate, engage, relax and provide enjoyment.

The wide variety of Apps include;

- Interactive Quizzes
- Scenes and sounds from nature
- Social games with rising difficulty & rewards
- Nostalgic themes and music to stimulate discussion and reminiscence therapy
